

Product Description

Functional Description:

- 1, A support program the full range of AVR microcontroller and modify the fuse bits.
- 2, supports the ISP low-voltage serial programming approach.
- 3, download line interface as a standard interface (with ATMEL original).
- 4, using the USB interface, you can use on a laptop without a serial port.
- 5, the shop produced the original version to simplify product, gather cost-effective products
- 6, support software for AVRSTUDIO original software with the AVRISP use.
- 7, the official recommended best AVR download tool! ! !

Supported microcontrollers include:

The system software currently has support for the following devices in all speed grades:

		ATmega8	
		ATmega16	
		ATmega32	
		ATmega32HVB*	
ATtiny11		ATmega48	
ATtiny12		ATmega48P	
ATtiny13		ATmega641	
ATtiny15		ATmega88
